AMJAD SHARQAWI

Software Development | UX/UI Design | Information Architecture

amjadsharqawi20@gmail.com | github.com/Sharqawi02 | amjadsharqawi.com

SUMMARY

Computer and Information Science graduate (BSc, Malmö University, 2026) with a background in software development, UX/UI design and information architecture. Experienced with React, Node.js, Python (Flask), Java and C#, and relational databases (PostgreSQL, MySQL). Built a production quiz platform used by medical students and completed a quantitative thesis on UX design and conversion in EdTech.

TECHNICAL SKILLS

Backend & APIs: Node.js, Python (Flask), Java, C#, REST APIs, Web Services, JSON, OOP, Information Security

Frontend: JavaScript, React, Chakra UI, HTML5, CSS3, Responsive Web Design

Databases: PostgreSQL, MySQL, SQL, Relational Database Design

Tools & Methods: Git, GitHub, Agile/Scrum, WordPress, Google Analytics 4, Google Tag Manager, Research Methods

UX/UI: Figma, Wireframing, User Flows, Interaction Design, Information Architecture, Usability Testing

Languages: Swedish (Fluent), English (Professional Working Proficiency), Arabic (Native)

PROJECTS

SmartStudy - Personalized Study Planner | Personal full stack project github.com/Sharqawi02/SmartStudy

- Built a responsive React and Vite application with a Python (Flask) REST API and PostgreSQL for course management, weekly study-time settings and saved study-plan history.
- Developed a rule-based planning engine that allocates study hours by course difficulty and exam proximity, with additional prioritization for imminent exams.
- Integrated the OpenAI API to generate Swedish study recommendations from calculated allocations, with a local rule-based fallback when AI generation is unavailable.
- Implemented session-based authentication, password hashing and user-scoped data access; stored study-plan allocations in PostgreSQL JSONB.

Cura Quiz - Medical Learning Platform | Production project

- Interactive quiz app actively used by medical students in Gothenburg; designed the user flows and interface.
- React and Chakra UI frontend; REST API backend on PostgreSQL, with dynamic question sets, live results and real-time interaction.

Personal projects

- Scheduler: Full stack calendar and planning app inspired by Google Calendar (React, Python API, PostgreSQL).
- BlueSky Project: Full stack content publishing app with a Java backend, input handling and validation.
- CryptoCoin: Responsive web app for tracking and managing crypto investments with dynamic data handling.

WORK EXPERIENCE

Web Developer Intern - Cloudo AB | 2025 (4 months)

- Redeveloped and restructured a company website in WordPress, applying UX/UI and information architecture principles to improve navigation and content hierarchy.
- Worked with stakeholders to translate business requirements into usable page structures.

Terminal Worker - DSV (via StudentConsulting) | 2024-Present | Warehouse Worker - Airme | 2022-2023

- Logistics and warehouse work alongside my studies, building reliability, teamwork and time management.

EDUCATION

BSc, Computer and Information Science (180 credits) - Malmö University | 2023-June 2026

- Thesis (co-authored, 15 credits, written in Swedish): Cognitive Dissonance in EdTech Design: A Quantitative Study on the Effect of Visceral Animations on Conversion.
- Ran a 2×2 between-groups experiment (layout × animation, N=43) on a live EdTech landing page, measuring click-through and engagement time with Google Analytics 4 and Google Tag Manager under GDPR-compliant opt-in consent.
- Analysed results with Fisher’s Exact Test: no significant effect on click-through ($p > 0.05$); descriptively, a vertical static layout gave the shortest engagement time, indicating more efficient initial information processing.
- Coursework: Web Development, Web Services, Cross-platform Web Applications, Database Technology, OOP, C#, Information Security, System Development (Agile/Scrum), Interaction Design, UX Evaluation Methods.

Technical Program, Information & Media - NTI Gymnasiet, Malmö | 2020-2023
